	Touch Digital Lock	Touch Digital Lock + Fingerprint

It is even more convenient with a friendly voice guidance system!

The voice guidance system makes the safe smarter and even more convenient to use.

UNI TEX - UVCM STEEL

It is the world's first three-dimensional texture product to use UV technology on colored steel sheets. It has a beautiful appearance, is easy to apply in various patterns, and is a new material that does not change color even after long-term use.

Motorized automatic locking device!

When you enter the password, the automatic motor function unlocks the safe, and when the safe door is closed, the sensor detects this and the door is automatically locked.

Smart Touch Display Activated By Touch.

The password can be set to a wide range of 1 to 8 digits, and it has a slim design with no external protrusions.

Fingerprint recognition (optional)

A built-in fingerprint recognition device further enhances convenience and security. (※Up to 40 people can register fingerprints. It boasts a high recognition rate using the semiconductor method.)

Shock and tilt detection function alarm operation.

When an external impact or tilt occurs, a strong 105dB alarm sound, similar to the sound of an airplane or train, it is designed to alert the surroundings so that outsiders cannot take it. (Optional)

If there is an error in entering the password, the safe sounds an alarm.

If you enter the wrong number consecutively, the safe's internal alarm sounds, allowing you to prevent theft in advance. (※If you enter the wrong password more than 3 times, the lock will go into an automatic lock-out mode for 1 minute(ding ding ding sound))

Booil fire safes are certified fire resistance technology.

Our excellent fire resistance safes have been globally certified and technologically ascertained globally.

It has enhanced anti - burglary performance.

The strong locking bolts applied to this series product guarantees perfect sealing power by tightly fastening the door and body of the safe.
