## lock system

### Digital Type

This product is equipped with a digital lock that can be unlocked by entering 2 -10 digits. The position and angle of the key pad allows users to enter these digits most conveniently. In anticipation of unforeseeable trouble, there is also an override code provided for safety.

### Fingerprint Type

The level of security of this type of safe is exceptional, because after you initially store your fingerprints and then scan your finger to open the door, the safe will verify the stored fingerprints and then transmit the signal. Since the registered fingerprint is the only key, it eliminates the inconvenience of carrying a key around and the danger of copying the key or losing it, thus this system ensures safety and security. Most of all it is so ergonomically designed and crafted in terms of its position and angle that it provides the most convenient access in an office working environment. In anticipation of unforeseeable trouble in the fingerprint sensor system, there is also an override code provided for safety.
